Computer Science and Engineering (CSE)

Project Details

Project Title: Food Ordering Behavior Analysis Using Tableau

Department: Computer Science and Engineering (CSE)

College Name: P.V.K.K. Institute of Technology (PVKKIT)

**University: Jawaharlal Nehru Technological University Anantapur
(JNTUA)**

Academic Year: 2025–2026

Year of Study: IV B.Tech

Project Guide: Self-Guided (No Guide Assigned)

Project Domain: Data Analytics With Tableau

Tools Used: Tableau Public, Microsoft Excel, GitHub

1. Abstract

The **Food Ordering Behavior Analysis Using Tableau** project is a data visualization solution designed to analyze customer food ordering patterns using interactive dashboards. The project converts raw food ordering data into meaningful visual insights, allowing businesses to understand customer preferences, ordering trends, payment methods, cuisine popularity, and peak ordering times. By using Tableau Public, the project presents complex data through easy-to-understand charts, graphs, heat maps, KPI cards, and filters. The dashboard supports data-driven decision-making, helping restaurant owners and business managers improve operational efficiency and customer satisfaction.

2. Introduction

With the rapid growth of online food delivery services, organizations generate a large amount of customer order data every day. Analyzing this data manually is time-consuming and often fails to reveal meaningful business insights. The Food Ordering Behavior Analysis Using Tableau project addresses this challenge by transforming raw data into interactive visualizations. The dashboards enable users to monitor customer behavior, identify popular cuisines, compare cities, evaluate payment methods, and analyze ordering trends efficiently.

3. Objectives

- To analyze customer food ordering behavior.
- To identify popular cuisines and meal types.
- To compare food ordering trends across different cities.
- To analyze customer payment preferences.
- To create interactive dashboards using Tableau.
- To support data-driven business decision-making.

4. Tools and Technologies Used

- Tableau Public
- Microsoft Excel
- Microsoft Word
- GitHub
- SQL (for data preparation, if applicable)

5. Methodology

The project followed a structured methodology consisting of the following stages:

- Data Collection
- Data Cleaning and Preparation
- Data Visualization using Tableau
- Dashboard Development
- Performance Testing
- Documentation
- GitHub Submission

6. Dashboard Features

The dashboard includes:

- KPI Cards
- Interactive Filters
- Navigation Buttons
- Heat Maps
- Bar Charts
- Stacked Bar Charts
- Revenue Analysis
- Customer Preference Analysis
- City-wise Order Analysis
- Cuisine-wise Analysis

These features help users analyze food ordering behavior from multiple perspectives.

7. Results

The project successfully analyzed food ordering behavior and generated valuable business insights. The dashboards clearly displayed customer preferences, ordering trends, popular cuisines, payment methods, restaurant categories, and city-wise performance. Interactive filters improved user experience by allowing customized analysis.

8. Future Enhancements

The project can be enhanced by:

- Integrating real-time food ordering data.
- Connecting Tableau directly with cloud databases.
- Adding predictive analytics using Machine Learning.
- Developing mobile-friendly dashboards.
- Including customer sentiment analysis based on reviews.

9. Conclusion

The **Food Ordering Behavior Analysis Using Tableau** project successfully demonstrates the power of data visualization in understanding customer ordering behavior. The interactive dashboards simplify complex datasets into meaningful insights, helping businesses make informed decisions. The project improves business analysis, enhances customer understanding, and supports strategic planning through effective visualization techniques.

PROJECT DEVELOPMENT

Food Ordering Behavior Analysis Using Tableau

DEVELOPED DASHBOARDS OVERVIEW

BENEFITS OF THE PROJECT

- Understand customer ordering behavior
- Identify popular cuisines and meal types
- Analyze city-wise order trends
- Evaluate payment method preferences
- Improve delivery performance and customer satisfaction
- Support data-driven decision making
