

PROJECT PERFORMANCE TESTING

1. Introduction

The **Food Ordering Behavior Analysis Using Tableau** project was tested to evaluate its performance, accuracy, functionality, and responsiveness. Performance testing ensured that all dashboards, charts, filters, parameters, navigation buttons, and visualizations worked correctly without errors. The testing process also verified that the dashboard displayed accurate results based on the food ordering dataset.

2. Testing Objectives

The main objectives of performance testing are:

- To verify that the Tableau dashboard loads successfully.
- To ensure all visualizations display accurate information.
- To test the functionality of filters and parameters.
- To validate navigation between dashboards.
- To check the responsiveness of the dashboard.
- To ensure KPI values and calculations are accurate.

3. Test Cases

Test Case	Expected Result	Status
Dashboard Loading	Dashboard opens successfully	Pass
Dataset Import	Dataset imported without errors	Pass
KPI Cards	KPIs display correct values	Pass
Charts & Graphs	Visualizations display correctly	Pass
Filters	Filters update dashboard dynamically	Pass
Navigation Buttons	Navigation works correctly	Pass
Heat Map	City vs Cuisine heat map displays correctly	Pass
Dashboard Performance	Dashboard responds quickly	Pass

4. Performance Results

The dashboard performed successfully during testing. All worksheets and dashboards loaded without errors. Interactive filters updated visualizations instantly, and navigation buttons allowed smooth movement between dashboards. KPI cards displayed accurate calculations, and all charts correctly represented the food ordering dataset. Overall dashboard performance was responsive and user-friendly.

5. Challenges Faced

During project development and testing, a few challenges were encountered:

- Cleaning and preparing the dataset before visualization.
- Handling missing and duplicate values.
- Aligning dashboard components for a better layout.
- Configuring navigation buttons between dashboards.
- Optimizing charts for improved readability and performance.

These challenges were successfully resolved during the development process.

6. Testing Conclusion

The **Food Ordering Behavior Analysis Using Tableau** project successfully passed all performance tests. The dashboard is interactive, responsive, and provides accurate visual insights into customer food ordering behavior. All functional requirements were satisfied, and the project is suitable for business analysis, demonstration, and future enhancements.

7. Screenshots

Figure 1: Dashboard Overview

Description:

This screenshot shows the complete Tableau dashboard with KPI cards, stacked bar charts, heat maps, and interactive visualizations used for analyzing customer food ordering behavior.

Figure 2: Interactive Navigation Button

Description:

This screenshot demonstrates the navigation button that allows users to switch between different dashboards for better data exploration.

Figure 3: Heat Map Visualization

Description:

This heat map displays the distribution of food orders across different cities and cuisines. It helps identify customer preferences and regional ordering trends.
