

Solution Requirements

Functional Requirements

- Import food ordering dataset into Tableau.
- Clean and prepare the dataset for analysis.
- Create interactive dashboards and visualizations.
- Enable filtering based on city, cuisine, meal type, and payment method.
- Display KPIs such as total orders, revenue, and average ratings.
- Allow users to analyze customer ordering trends and business performance.

Non-Functional Requirements

- The dashboard should be user-friendly and easy to understand.
- Data should be displayed accurately and consistently.
- Dashboard performance should be fast and responsive.
- Visualizations should be interactive and easy to navigate.
- The project should support future updates with new datasets.
